

SHOP DOCUMENTATION

1. Login

User authentication **afeshop.africa/app/api/route237/login** here the user can login with the email, username, phone and password.

1.1. User update, show

- Update: **afeshop.africa/app/api/route237/users/{id}/update**
- Show : **afeshop.africa/app/api/route237/users/{id}**

Eg: **"user": {**

```
"id": 5,  
"username": "umagloire99",  
"first_name": null,  
"last_name": null,  
"email": "umagloire99@gmail.com",  
"phone": "+237656256685",  
"quarter": null,  
"avatar": null,  
"is_active": 0,  
"email_verified_at": null,  
"phone_verified_at": null,  
"schedule_delete": 0,  
"schedule_deactivate": 0,  
"received_daily_update": 0,  
"banned_until": null,  
"country_id": null,  
"state_id": null,  
"city_id": null,  
"deleted_at": null,  
"remember_me": 0,  
"created_at": "2020-09-26 18:00:14",  
"updated_at": "2020-09-26 18:00:14",
```

```
"picture": null,  
"city": null, // information about the city, country and the state  
"wallet": null, // wallet will be not null for merchant  
},
```

1.2. Password Reset

It's done in three phases:

- **password/create:** This route is taken the *email* as a parameter a **POST** method in which i will generate a link **password/find/{token}** and send it to his email. This link will redirect the user to the page to restore the password of afeshop with a **token**. **Url:** **afeshop.africa/customer/account/restore-password?token=xxxxx**
- **afeshop.africa/password/reset:** this route is used to reset password a **POST** method taking as parameter: **email, password, token**(the front end will get the token from the url: **afeshop.africa/customer/account/restore-password?token=xxxxx**)

1.3. Sent token

This route is used to send a token to verify the user email **register/token/send**, it is a **POST method** taking as parameter **phone**. A link is normally sent to his email for verification but if at that time the user has not been able to verify the email, we can use this route to another email for verification.

1.4. Twilio phone number verification

This part is used to verify the phone number of the user in which it will be done in 2 steps:

- **otp/sent:** use to send the code to the user phone number is taking as parameter **phone**, **POST** method
- **otp/check:** after the code has been sent the user need to enter that code for verification is taking as parameter **verification_code** and **phone**

1.5. User data

Here i have already presented all the data that the user can add

- **User update:** To update the user information using *users/{user_id}/update* with the method *POST*. I have already presented all the data
- **Show user detail:** to show detail about a user the route *users/{user_id}* with the method *GET*
